Mar 1 · 3 min read

TBIS Inc. Minimum Viable Product, March First, 2018

Be Titanium. We ARE the revolution.

Decentralized Infrastructure as a Service, supported on hundreds of thousands of devices, world wide. This unprecedented offering by Titanium Blockchain Infrastructure Services is considered, by our team, to be the catalyst for Initial Coin Offering sellout forty-two days ahead of schedule. Indeed, our infrastructure innovation is the first of its kind, far surpassing the capability of any potential competition. Regardless, throughout ICO and over the past weeks, our goal has remained unchanged. This goal has always been, and will continue to be transparency as we surpass precedent and expectation, demonstrating many new products and services for consideration by our valued Titan community and citizens of the world alike.

. . .

Our Minimum Viable Product is, to Titanium, a small yet mighty step. The first of many achievements that we will proudly present in the coming weeks and months. Today we are pleased to debut our Titanium ecosystem access application, codename "Element". Titanium's Element allows anyone, virtually anywhere, to employ a phone, tablet, or PC to access services, create websites, and even build virtual private servers. Element is a hybrid application, uniquely dynamic, highly accessible, and also a fully functional cryptocurrency wallet. Element represents an operational, streamlined, and Titanium cloud hosted virtual space. It may exist

3/22/2018

Be Titanium. We ARE the revolution. – TBIS – Medium

almost anywhere, and for Titans, represents unification within the decentralization of Titanium's blockchain ecosystem.

. . .

Products are under development and subject to change.

Suffice it to say, with Titanium's Element, smartcontracts may now be considered smartcommerce. More specifically, Titanium's custom blockchain will function with a relatively small total supply of 60 million TBAR. Basic economic principles relay that limited supply paired with high demand might foster an economy of much opportunity.

Via Element, we offer a first look at Titanium's Ecosystem in practice. This universal application functions as both a wallet, and the future home of vastly marketable consumer to enterprise level resources for all TBAR holders.

3/22/2018

Be Titanium. We ARE the revolution. – TBIS – Medium

Product is under development and subject to change.

The next generation of IT Infrastructure begins at sign up. A few taps or clicks begin full wallet function, and within moments, deployment of services, apps, or even entire organizations; all backed by consumer and enterprise resources, spanning the globe.

. . .

Product is under development and subject to change.

3/22/2018

Be Titanium. We ARE the revolution. – TBIS – Medium

Element invites anyone seeking Titanium's revolutionary services to interact immediately via unified multi-currency wallet. Function includes the ability to store currencies of all kinds, thus both TBAR holders and future Titans alike may join our revolution without the necessity of full technical know how.

. . .

Simply create, and instantly access anything from Virtual Private Servers to Content Management Systems and e-commerce platforms, all next to your favorite cryptocurrency in Titanium's ecosystem. Of course, Element is hosted exclusively on Titanium's decentralized cloud based infrastructure. Via the application, goods and services may be purchased three distinct ways: with TBAR Utility Token, staking TBAR to be returned over time, and/or staking personal or enterprise level hardware.

. . .

3/22/2018

Be Titanium. We ARE the revolution. – TBIS – Medium

Products are under development and subject to change.

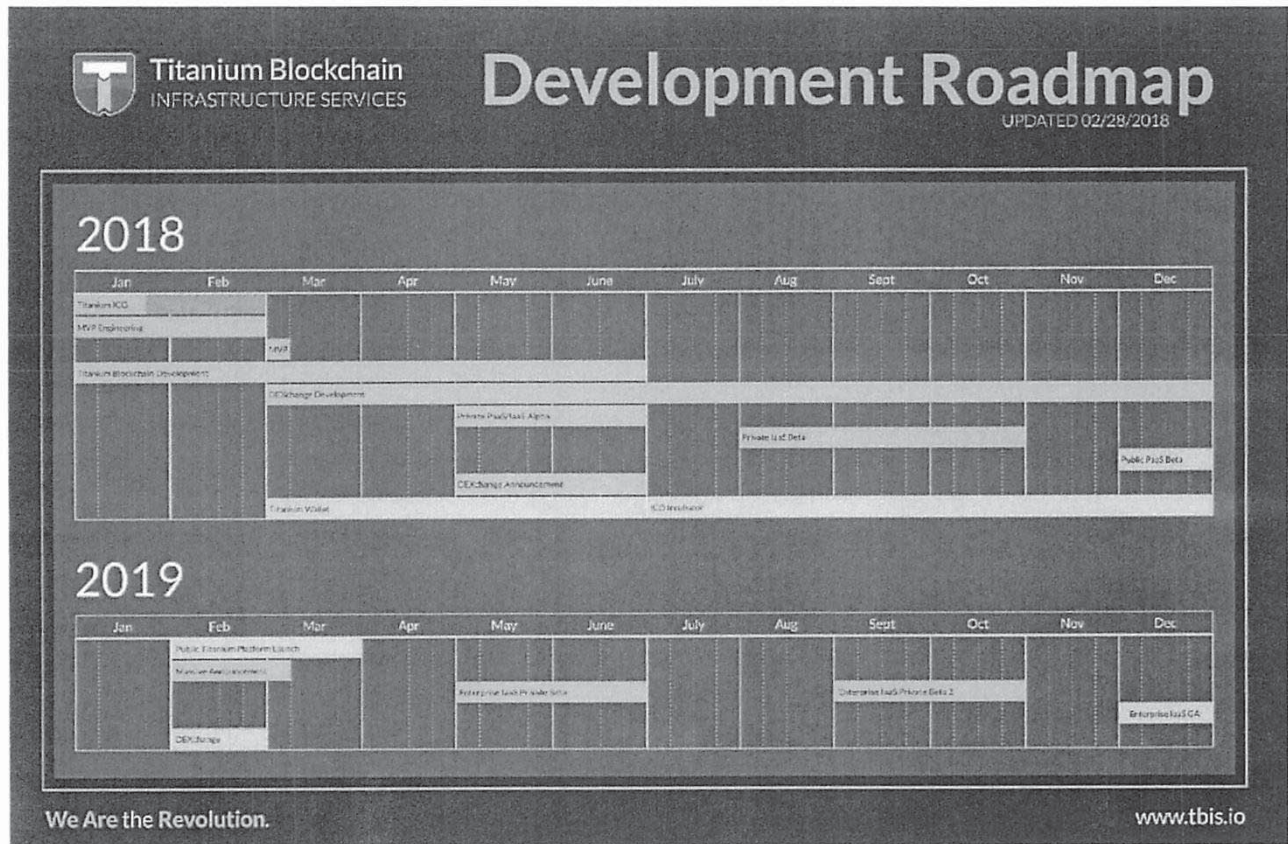

Selecting from Element's catalog and the smart application will quickly guide even a novice through checkout and service implementation. As all Titanium products are under heavy development at this time, we are presenting Element in pre-alpha form with a fully updated roadmap (below).

. . .

Inception to global enterprise, and from a living room to clients across the globe, Titanium Blockchain Infrastructure Services proudly presents Element as the first and only decentralized internet of commerce. A small step for mankind, however one that we will take together. Together, Titans, we ARE the revolution.

3/22/2018

Be Titanium. We ARE the revolution. – TBIS – Medium

Updated Roadmap, February Twenty-Eighth, 2018

All ideas, products, and future plans are subject to change at the discretion of Titanium Blockchain Infrastructure Services, with or without public notification. TBAR is a utility token designated to be used within the Titanium Ecosystem to purchase products and/or services. TBAR token is NOT a Security. All TBIS Inc. content must be used for informational purposes only and should never be considered advice. No information on Titanium’s website or social media should be considered the basis for any financial decision or transaction.

Prices and data depicted in TBIS Inc. media are for display purposes only and not intended to reflect actual product costs or information.

[3/13/2018] Pierre Werner - The uCrypto Madness Show Speci...

1 MR. WALKER: And you do have the Grizzly Adams
2 beard going.

3 MR. SNOOK: Yeah, I let November get out of
4 hand.

5 MR. WERNER: November. What, last November?

6 MR. SNOOK: Yeah.

7 MR. WERNER: Yeah, that's a grizzly
8 fucking beard.

9 MR. SNOOK: I always shave it off eventually,
10 but I'm going to see how far it goes before it is the
11 summer, you know.

12 MR. WERNER: Okay, guys, please welcome on the
13 show, give us a share, give us a share right now, Chief
14 Technical Officer, Christopher Michael Snook.

15 MR. SNOOK: Howdy, howdy.

16 MR. WERNER: Howdy, howdy, bud. How are you
17 doing, man?

18 MR. SNOOK: Oh, I've had better days, but you know
19 I'm still trying to keep my sense of humor.

20 MR. WERNER: Right on, man. You know. Hey, do you know
21 what, man? I've got to say this, I like appreciate the fact
22 that you are on right now, bud. I really do.

23 MR. SNOOK: Hey, I don't know that I'm doing
24 absolutely the right thing. But I definitely want to tell
25 everybody that we're working hard to -- lumberjacks.

1 MR. WERNER: Yeah.

2 MR. SNOOK: We're working hard to build this product.

3 This has been my dream for years. It is kind
4 of a twisted idea that I made up five years ago when we
5 were building or putting together the majority of Azure.

6 And I thought about how data centers are all condensed
7 in one area, and how weak that is if it were a battle
8 scene. So if you want to spread out your resources in order
9 to become more effective and resilient.

10 Anyway, so that was where all this came from.

11 MR. WERNER: Okay. Thanks for that little
12 explanation there. Let's see.

13 Bob, what do you want to add to this?

14

15 MR. WALKER: I am going to play Switzerland in
16 this, and let you do your questioning.

17 MR. WERNER: All right. So.

18 Well, fuck, man, let's entertain.

19 Like, how long have you known Mr. Stollaire?

20 MR. SNOOK: Oh. See, Mike and I started working
21 together three or four years ago at HPE. We were working
22 on the cloud broker project for the FAA at that
23 point. Stewart, some of the devs that I have on my
24 teams, Stewart Siegler (phonetic). Some of the others
25 don't want to necessarily be named. But --

1 MR. SNOOK: -- he bought a house with it.
2 Yeah. Anyway, Bitcoin is an interesting thing. It's a
3 wonderful ride. And I'm honored to be involved in its
4 history. And right now, I just want to do exactly what
5 I've got to do to build this cloud.

6 And this hack happening was a real -- the
7 timing was real strange, guys. But just know this, --

8 MR. WERNER: Very strange.

9 MR. SNOOK: -- I'm going to do everything I can
10 to bring this company to success. The bar, T-bar thing,
11 I can't really discuss that. I really don't know what to
12 think. It was a really quick decision. It wasn't mine.

13 I didn't have any input. While I understand what it is
14 being done, I also understand a lot of people bought the
15 coin when it was deflated. While that is not protecting
16 investors, who takes care of them? I don't know. And it
17 is not my decision. I just don't know.

18 I have a lot of really smart people that are
19 telling me that it might be bad. But, again, it is not
20 my problem. It is Mike's. I'm just building the
21 technology, guys.

22 And I'm building technology. We have a MVP.
23 And I will be happy to show it to you as soon as we're
24 ready to go. And that would be Monday, Tuesday-ish. The
25 guys might be made at me if I'm rushing a little bit.

[3/13/2018] Pierre Werner - The uCrypto Madness Show Speci...

1 But all this happening really put a damper on
2 our progress, right. Right when we were about to
3 deliver. So what was delivered was by the COO. That was
4 not mine. And truthfully I didn't even know it existed,
5 so.

6 MR. WERNER: Chief operating officer?

7 MR. SNOOK: Yeah, so I guess his team developed
8 the MVP that you guys saw.

9 MR. WERNER: Okay.

10 MR. SNOOK: That's not the one we're
11 developing.

12 MR. WERNER: Richard? What is his last name?

13 MR. SNOOK: Silver.

14 MR. WERNER: Silver. Richard Silver. Hey,
15 guys, if you could share this out to the Telegram group
16 and see if we can get Richard Silver on.

17 MR. SNOOK: Yeah.

18 MR. WERNER: And talk about his MVP. There's
19 now appearing to be two MVPs.

20 MR. SNOOK: Same idea.

21 MR. WERNER: Okay.

22 MR. SNOOK: If you want to make a contract for
23 a resource with Blockchain. And in this particular case,
24 it will be a platform. The particular one we did was
25 WordPress. It could be Jango (phonetic). It can be in

1 any other. But the end goal was to get your web page to
2 come to the admin page and start designing it. So it
3 should just be --

4 MR. WERNER: You could design the website?

5 MR. SNOOK: -- press a couple of buttons, pay
6 for it and you're good.

7 MR. WERNER: Oooh. I do like that.

8 MR. WALKER: Chris, can you adjust your camera
9 down a little bit. We're seeing about from your nose.
10 Your nose to your eyeballs, yeah.

11 MR. SNOOK: How about there?

12 MR. WALKER: It's Grizzly Adams that's all.

13 MR. WERNER: Any chance you could turn on the
14 light?

15 MR. SNOOK: Here, let me, the speaker is going
16 loud in the other room which is listening to this. So I
17 don't want it to -- I came into my daughter's bedroom to
18 try to give us a place to talk.

19 MR. WERNER: Micah, let's discuss this another
20 time. It's a good one though.

21 MR. SNOOK: Can you see me now?

22 MR. WERNER: Not really. It's still you know.

23 MR. SNOOK: Yeah, I wish I was better prepared.

24 Like I said, this isn't my time slot. I just definitely
25 wanted to come on and tell everybody that we're working

[3/13/2018] Pierre Werner - The uCrypto Madness Show Speci...

1 hard, whether the communication within the company is
2 working well, that is not the case right now. But
3 there's a lot going on.

4 MR. WERNER: Right, yeah, there is.

5 MR. SNOOK: We didn't ask for anybody to come
6 do this to us. That's the thing. And I'm certainly
7 appalled that security wasn't better. My CFO or myself,
8 we did not have control over the coins, never have. And
9 I'm just appalled that they were in a position that they
10 could be stolen.

11 I myself keep all of my crypto in a Trezor. I
12 never keep any of my pass phrase in the same place.
13 Everything is in safe deposit boxes and safes. There is
14 no way any hackers get anything out of me. Come do it
15 and over my dead body. They have to come in my house.
16 Then they have to get the codes out of me. So, that
17 would never happen to me. I will say that right now.

18 MR. WERNER: So, Chris, when I sent Michael, I
19 sent him 220,000 ETN, which with the bonuses and
20 everything should have been somewhere around 40,000 you
21 know bar -- 40,000 bars. And he told me when we went and
22 played chess that my bars were in an offline wallet,
23 printed, in a safety deposit box in a bank.

24 And so you know, so you know I'm like what the
25 fuck, how did these fucking coins, you know, if my 40,000

1 coins are in a fucking vault in a safety deposit box, why
2 the fuck isn't the 18 million in a -- you know?

3 MR. SNOOK: And my Ethereum developer told me
4 when he released the contracts so that the rest of the
5 coins could be minted, this was done by the COO, Richard
6 Silver. And I was told that he had the sole possession
7 of these coins. So they were stolen from him in a
8 strange small window.

9 MR. WERNER: All right. This is the first time
10 I've heard this, okay, so.

11 MR. SNOOK: As far as I know. This is what I
12 know is my developer told me he gave the coins to him to
13 mint. We saw it on the all hands. They were minted.
14 And then somebody knew to go take them. That's the
15 thing. I didn't even know these things were in existence
16 right now, right.

17 MR. WERNER: Not only that. Not only that.
18 So, guys, I've been doing you know my research and all
19 that stuff. And what I have found, let's see here, where
20 is that one, hold on just a second. Let's see here,
21 what's this one? No, that's the main one. And then I'm
22 trying to find the supposed hacker's address. Okay, this
23 one right here.

24 So let me drop this in the comments.

25 MR. SNOOK: Hey, guys, I'm going to try to find

1 However, Titanium is the idea that some mom and
2 pop and Medium all can have their missions together in a
3 cloud. Now, of course there are levels, right. You
4 can't have medical information and credit card
5 information in somebody's garage but you know you could
6 have somebody's website.

7 Anyway, there are many use cases to go into the
8 Titanium infrastructure ecosystem. And they are
9 definitely all viable. And that is what this ICO was for
10 was to fund this development, and I just want that to
11 happen. I want to continue with my work.

12 MR. WERNER: Okay. So, would it be proper to
13 say who the Ethereum solidity developer who he is and ask
14 him t to come on the show?

15 MR. SNOOK: I would like to get permission
16 first. He is very shy, but I would like his permission
17 first.

18 MR. WERNER: I understand.

19 MR. SNOOK: Let's talk about that. He is
20 recently -- I can't talk about this part.

21 MR. WERNER: Okay, yeah. About that part,
22 fine, because I checked out some of these addresses,
23 Ether addresses on (inaudible) dot IO. And I think if I
24 had the guy that actually created it, he could tell me,
25 okay, like this is why I only created this many and this

[3/13/2018] Pierre Werner - The uCrypto Madness Show Speci...

1 MR. SNOOK: It is the bomb. FileCoin is it,
2 and that is what I wanted to base most of our current
3 technology.

4 MR. WERNER: FileCoin is the bomb?

5 MR. SNOOK: Dude, FileCoin is it.

6 MR. WERNER: Really?

7 MR. SNOOK: Yes. Do your research.

8 MR. WERNER: Okay, what are their call letters?

9 MR. SNOOK: So, FileCoin? So IPFS is who they
10 are. But I don't know what the call letters are per se.
11 It is Interplanetary File System.

12 Anyway, so that is the majority of what I
13 wanted to base our technology off of. I did eventually
14 want to do another Blockchain, but that's a year or two
15 from -- at least. And the next exchange, many years from
16 now. They are trying to do it right now, and I am like
17 "We are not a bank." You may know people who are banks,
18 but it's a -- making an exchange is a complex problem.

19 Why didn't somebody from TBIS tell me about the
20 hack? Good Lord. Good question. Why, why was I -- why
21 did I find out on Telegram?
22 Bad communication. Obviously, nobody thought that I
23 needed to know right at that point. I was here on Slack
24 all day, a slave to the computer. So I was here.

25 Anyway. If the T-bar fails, can we take the

1 product elsewhere? I'm going to build the product. The
2 T-bar is not going to fail. The bar is not going to
3 fail. He -- he may end up with some problems with the
4 investors, who are people who bought the coin during this
5 hack. But the technology is still going to happen,
6 whether I got to build it with no money. That is
7 what it comes down to.

8 But having resources and money and people to
9 help you with it certainly does make it happen faster,
10 so.

11 MR. WERNER: So you can still build it though?

12 MR. SNOOK: Yeah, I've always had the idea.

13 This money, the money helps me make it happen. One of
14 the things I need is I need servers. I need, I need to set
15 them up together. I need to see the scenario in reality.
16 We've got bugs to break, guys. I'm talking about as this
17 thing scales, we are going to have problems to fix. And just
18 like anything. Azure wasn't born overnight, you know.
19 None of this was born overnight.

20 And I've got some of the best developers in the
21 world. I've got the best team.

22 MR. WERNER: Really?

23 MR. SNOOK: Yeah, all my devs have a MBA. I
24 have a MBA too, you know.

25 MR. WALKER: I have a MBA.

1 gave the order -- who gave the order to print those?"

2 MR. SNOOK: Not me.

3 MR. WERNER: That is what I want to know.

4 MR. SNOOK: Not this guy.

5 MR. WERNER: He can answer that is the thing.

6 He can answer that. Like hopefully he can answer that.

7 Like if he doesn't, you know what, man, I'm going to be

8 honest with you, bud. Like if he doesn't answer that

9 question, wouldn't you just get a lawyer and lawyer up

10 because --

11 MR. SNOOK: Michael, it's not him. I'm telling

12 you. I've known this guy a long time.

13 MR. WERNER: And it's Richard. It's Richard.

14 He sent it to Richard. So Richard --

15 MR. SNOOK: Yeah, I don't know Richard from

16 anybody. The guy has barely any experience. Most of my

17 devs won't work with him. And he has been making a buy

18 for power in the company, trying to kick me out, trying

19 to put this communications officer in. She has cut off

20 my e-mail, my slack a couple of times, has been

21 interviewing my devs privately. I don't like Richard. I

22 don't like his communication officer, (inaudible) or

23 whoever she is. I find them all to be very suspicious.

24 And I've said it. So if I'm in any trouble, just I'm

25 suspicious of these people.

1 Michael Stollaire is a good guy. He has good
2 intentions. He has nothing to gain here, but Richard
3 Silver did. He took over the company essentially. Made
4 this NVP that I didn't know about. And it is fake. That
5 wasn't real. What I am building is real. I can actually
6 make servers on the server but it has got a few bugs
7 still left in it and so it is not ready for public
8 consumption. A few days.

9 MR. WERNER: Okay, let's see here. I'm trying
10 to go through the comments, guys.

11 MR. SNOOK: There's a lot. I can't even read
12 them all. You see, guys, I'm not hiding. You know, I
13 just want to do the right thing. I don't want anybody to
14 run and sell everything. I don't want anybody to hold
15 because I told you so. I'm trying to make the
16 technology. That's all I can do.

17 As far as keeping the PR up, this isn't helping
18 PR. However, I think that there was enough.

19 MR. WERNER: This is definitely helping, man.
20 I mean if we --

21 MR. SNOOK: Okay, because that is what I'm
22 trying to do.

23 MR. WERNER: We didn't hear from anybody in the
24 company and nobody willing to step forward except for
25 poor Miner Bob, who is just trying to --

1 MR. WERNER: -- would rise.

2 MR. WALKER: Right. So you would end up
3 spending more, but, you know, that was kind of the thing.
4 So when we started looking, people on the show were
5 bringing us these accounts, and we started looking and
6 we're like, "Wow, that's kind of weird that someone felt
7 like, you know, ten minutes to nine, almost like they had
8 to be at a nine o'clock meeting or something like that
9 and they got off." "Okay. I'm going to work," and -- and
10 clock in. And then they work the whole workday, and
11 let's say it's a nine-hour workday; right? So nine --

12 MR. WERNER: You know what really fucked me,
13 what fucking blew my mind?

14 MR. SNOOK: What's that?

15 MR. WERNER: I'm going to be honest with you
16 guys, was -- and I didn't catch it -- okay? -- was that
17 Stollaire had reimaged his computer. Now, at the time,
18 he said that he did that because of the hackers. And I
19 don't know who said it on the show. I don't know if it
20 was Chris or Zed (phonetic) or whatever but this -- nice
21 hat, bud.

22 MR. SNOOK: Oh, I'm drinking now.

23 (Laughter.)

24 MR. WERNER: I need my -- hold on. I'm going
25 to get my hat. Hold on a second.

1 MR. SNOOK: Get your hat, man.

2 MR. WALKER: So, you know, and that -- that
3 also came out on the show that Mike reimaged all of his
4 computers, and someone brought up, well, why don't you
5 just unplug them from the internet if they are being
6 hacked, you know?

7 MR. SNOOK: I think he should have gone and
8 bought new computers or new hard drives.

9 MR. WERNER: Okay. But --

10 MR. SNOOK: You know, it was -- you know, who
11 is prepared for such a thing; right? So I don't blame
12 Mike for what he did. I just think there was another
13 answer. Go buy another computer but --

14 MR. WERNER: Yeah, slow down. Slow down --
15 okay? -- because when he was on the show and whatnot
16 about the same thing -- okay? -- like -- okay. Well,
17 yeah, if I had hackers but, you know, apparently this,
18 you know, wasn't my wallet. This is -- you know, it was
19 sent to Richard. He got hacked. I didn't get hacked.

20 And then if I was hacked and if I was hacked
21 for 12 million, 16 million, whatever I was hacked for,
22 somebody on the show, I remember -- I thought it was you.
23 Maybe it was Ed that said, "Well, why didn't you just
24 disconnect it from the internet because you would be
25 saving evidence of a hacker?"

[3/13/2018] Pierre Werner - The uCrypto Madness Show Speci...

1 MR. SNOOK: Let me tell you what I think it
2 was. He thought that --

3 MR. WERNER: Okay.

4 MR. SNOOK: -- the hack was on his machine.
5 There you go, man. He thought the hack was on his
6 machine, what he told me.

7 MR. WERNER: Hey, hold on. Hold on, everyone.
8 Salud, you know, to honesty, excellence and integrity --

9 MR. SNOOK: And inebriation.

10 MR. WERNER: -- and inebriation. You know,
11 fuck it. Let's get drunk and tell the truth and bet it
12 all. You know, it is what it is, and if you guys have
13 confidence in us, you have it. If you don't, you don't.

14 MR. SNOOK: Well, you may not have confidence
15 with me we're in this but --

16 MR. WERNER: Hey, you know, I've got Pablo
17 Escobar's hat right here, bud. I bought this fucker in
18 Colombia off his brother.

19 MR. SNOOK: Did you really, man?

20 MR. WERNER: Yeah, man.

21 MR. SNOOK: Pablo.

22 MR. WERNER: Remember that one -- yeah, Pablo
23 Escobar where he's in -- locked in Cathedral? And that
24 was the personal prison that he built for himself, and
25 he's posed in the -- in front of the --

Titanium Announcements, [04.03.18 15:50]

Dear Titanium Community,
We would like to provide a brief update in order to address your concerns. Thank you for bringing them to us and also for your patience while we restructure internally. This process is nearly complete and none of Titanium's products or services will be affected.

•Christopher Michael Snook is no longer employed at Titanium. Formerly, he held the office of Chief Technology Officer.

•Over the past month, Snook made poor decisions

including, but not limited to, public slander of TBIS Inc., CEO, Michael Stollaire, and COO, Richard Silver. This behavior is unacceptable and not representative of Titanium. We have initiated legal proceedings to hold Christopher Snook accountable for his actions. Please know that we understand the confusion that has occurred as a result of Snook's inexcusable behavior.

•Titanium has brought on an acting CTO whom we believe will add much value to our Company.

Titanium Blockchain Infrastructure Service

Just as steel changed the building forever, Titanium will usher in a new era of network construction.

With TBIS' proprietary Company (CaaS) and Infrastructure as a

*****UPDATE***** MUST READ*****3/4/2018 : TBIS

•As many have noticed, our website has not been updated with information regarding the BAR token theft, TBAR fork, and MVP announcements. We are currently updating our website and such discrepancies will no longer take place moving forward.

•Titanium’s development engineers are under investigation. We will provide more information when we are legally able to do so.

•TBAR is still on track to complete tomorrow, Cobinhood, Tidex, and FatBTC users will automatically be handled by those exchanges. We fully expect others to be finalized soon.

•CEO Michael Stollaire has been working with law enforcement officials and is unable to speak publicly about the BAR token theft. His absence from our Telegram and Discord communities is not by choice.

•Titanium’s new security procedures, implemented immediately after BAR token theft, will be detailed soon.

NOTE: Michael Stollaire would like to relay that the purpose of this announcement is to inform the Titanium community immediately.

•We understand the necessity of addressing this information in more detail and will do so via official Titanium Medium Blog to be shared @TBISINC and across social media platforms.

every device, from enterprise level to consumer devices, will be virtualized; routers, firewalls, equipment such as cryptocurrencies exist in an entirely cloud-based environment based on the decentralized Ethereum network. Paired with cutting-edge enterprise-grade encryption and monitoring technology, this network is designed to be a shock-proof internet infrastructure that is both lightweight and completely scalable.

Imagine being able to set up an entire network infrastructure for a global company in your living room, without spending thousands of dollars installing rack servers, routers, and any other network component that would be needed to access the network.

DEVELOPMENT Amazing interview with Richard Silver, the COO of Titanium! (self.CryptoCurrency)

submitted 3 months ago by Mikeey89 Redditor for 12 months.

To get under the skin of Titanium I made a short interview with Richard Silver, the Chief Operating Officer/Director of Marketing of Titanium.

If you want to participate in the ICO you can use this link to register: https://ico.tbis.io

What is your position in Titanium and what are your tasks?

I am the Chief Operating Officer of Titanium and responsible for day to day operations and marketing. As second in command to Michael Stollaire I direct a bright and polished future for Titanium. Grandiose visions abound here, and I cannot wait to share them all (in time).

How did you get hired by Titanium?

After becoming acquainted with Michael, and theorizing future

possibilities for TBIS. My background is in infrastructure security, marketing, and team management.

Live Discussion on Discord

What other positions have you had before you got this job?

Most recently, Chief Technology Officer for a cyber security firm in the Middle East. Before this, I was a Technical Director and Devops Engineer. Technology has always been my passion. I founded my own small business, a PC repair company, at 16. At the age of 18 I also began a career in Real Estate Investment and dabbled in photography. After achieving the position of software engineer at The University of Oregon the rest is history. Soon, the rest will make history.

Titanium has some ambitious plans. Where do you see Titanium in year 2020?

I see Titanium being a pillar to the internet of value. We ARE the first in this arena. Our plans are audacious, well conceived, and foundation breaking. TBIS is the most secure and resourceful path for future infrastructure services, and its proof of concept is blockchain technology itself. Unfortunately, I cannot share all details with you as we are pursuing intellectual, utility, and design patents in various areas.

Resources & Tools

CoinCheckUp (Tracking and analysis)
CoinDesk (Crypto News)

Michael Stollaire has a lot of experience from his other company EHI. How will his knowledge and experience make an impact on this project?

Michael brings a lot to the table with his own background (and patents) in infrastructure security, highly publicized client connections from his tech consulting firm, EHI, and overall background in corporate marketing management. Titanium

Blockchain Infrastructure Services (TBIS/Titanium), is thriving because of Michael's infectious methods of finding and retaining strategic talent for his vision.

The competition in the blockchain market is getting bigger every day. How will you separate yourself from the rest?

We want to fundamentally change the landscape of blockchain technology, and that's exactly what we will do.

What do you think is Titanium's biggest advantages?

I would call Titanium's biggest advantage a perfect storm of ideas, execution, and customer service. While I cannot show you all of the details pertaining to where we will take the world, I can say that you probably aren't thinking big enough... Yet!

What are Titanium's main challenges right now?

Titanium's main challenge is to show the world how Titanium Blockchain as a Service (TBaaS) will shift both the interpersonal and political landscapes of the internet. Our Whitepaper, version 2.5, is highly detailed and user friendly (<https://tbis.io/titanium-infrastructure-services-white-paper-v2-5/>), just as we envision the future for dynamic, decentralized infrastructure.

Something else you want to add?

I'd like to thank the wonderful team that is working around the world, and around the clock to bring Titanium Blockchain Infrastructure Services to everyone (everywhere). What we are working on now will change the world tomorrow, and forever.
